## Colours

## Installation Guide

Tanks must be installed on a smooth, solid, level surface - either a concrete slab at least 100mm larger than the tank or a boxed and compacted sand base that is at least 300mm larger than the tank.

We recommend that the 700L, 1000L and 1050L tanks are installed on a concrete base.

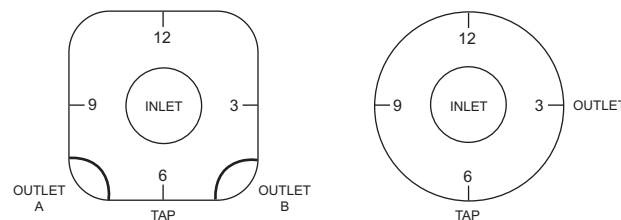

Ensure that the tank overflow is plumbed into the storm water system or piped away from the tank to prevent it washing away the base material.

Maxicube tanks must be securely attached to a wall at the top by the bracket supplied.

Minimum 25mm clearance is required between the tank and any other object.

Flexible hose must be used to connect any rigid pipework to the tank outlet.

Pipes connected to the tank must not rely on the tank for support.

Please specify the location of the overflow when ordering.

Inlet cover

Stainless steel strainer

Inlet cover & strainer

## Features

- Manufactured from 100% U.V. stabilised, food grade polyethylene resin.
- To ensure maximum strength, all maxiplas tanks are made of a solid one piece construction.
- All tanks are supplied with
  - Inlet strainer
  - Overflow screen
  - 25 mm tap
- Colour coordinated fittings.
- Inlet cover blocks light from entering tank which prevents algal growth, still allowing for easy strainer cleaning.

Maxicube slimline tanks can be simply connected together to increase water storage capacity while still maintaining strength and ease of handling.

## Warranty

Maxiplus warrants its tanks by a pro rata warranty for 10 years from the original date of purchase.

This warranty covers the original purchaser only and is not transferable.

Maxiplus will repair or replace at its discretion the tank affected by a defect or fault caused by the manufacturing process.

Fading or colour change, damage caused by accidents, misuse, do-it-yourself repairs or incorrect installation, and any subsequent costs (including freight of replacement tank) are not covered by this warranty.
